OUR DEPARTMENTS

Waste systems

- Underground waste containers
- Semi-underground waste containers
- Above-ground waste containers, cubes
- Textile containers
- Euro ESA & Euro Flex
- Waste baskets, ashtrays and battery boxes
- Waste sorting, indoor and outdoor
- Steel and compressor containers
- Chemical cabinets

Odour remover and collection

- Gel blocks
- Absorbent mats for collecting

Park equipment

- Tables and benches
- Bike stores
- Bike racks
- Recycled plastic

Post boxes

- Zwick, Renz & Juliana

Bio and waste bags

- Biodegradable waste bags and ordinarybags

Undergroundcontainers

Investing in underground waste systems can be a saving.

Underground waste containers for residual waste, food waste and recyclable waste fractions are the perfect waste system in terms of economy, hygiene, robustness, weight compression, environment and operation.

Euro Hydrolift

Euro Ti Cortonsteel

Underground containers with 2 chambers

The greater compression ratio allows the emptying frequency to be significantly reduced compared to the traditional system — an environmental bonus.

The inner container is placed in a concrete box, which is part of the product. A security system is also included. The containers incl. the top are made of galvanised steel with the option of multiple bundle-emptying systems. The top can be supplied in stainless steel and can be varnished in all RAL colors.

The containers can also be supplied with various throw-in systems.

Euro 10 pillar divided into 2 chambers

Euro Sky pillar divided into 2 chambers

There are several advantages to having underground containers with one or two chambers

- Environmentally friendly solutions
- Easy emptying
- High quality
- Large volume
- Minimises unpleasant odours
- Minimises costs
- Better accessibility

WORLD NEWS

BJARKE INGELS, BIG & EURO GROUP HAVE DEVELOPED A SCULPTURE LINE FOR EURO GROUP

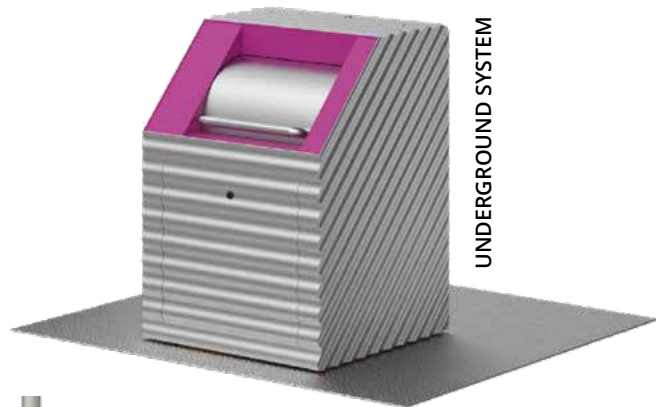

A desire by the Euro Group to rethink waste containers has led to a collaboration with Bjarke Ingel's practice, Big.

POST MOUNTED LITTER BIN

POST MOUNTED LITTER BIN

GROUND FIXED LITTER BIN

We are introducing the design of waste systems, which is the first stage of our sculpture line.

Semi Underground

Investing in Semi Underground waste systems can be a saving.

Semi Underground waste containers are available in two versions; square or round. The outer container is available in concrete or plastic with different options for cladding. The inner container is available with a solid plastic container or solid metal container. Also available with two chambers.

Many of the products come in several variations and materials, please contact us for info.

ESA cabinets

The eco-cabinets are externally clad with either pressure-impregnated wood or maintenance-free recycled plastic. They are made of galvanised iron profiles and are suitable for all types of containers.

Euro ESA

Container hide

Euro GFT box

Euro Flex

Euro Flex is another type of waste lake where the waste container is more visible. This solution makes it a manageable waste system. In addition, the number can be easily expanded by an increased amount of waste.

Compressor-container

Compressor container with a volume capacity from 16 to 22 m³. There are many options and variations with our compressor container. Please contact us for further info.

Steel-container

The steel containers are available in various sizes and designs.

Plastic waste containers

2 and 4-wheeled containers in many different dimensions and colours.

Euro hardware/software

Filling sensor

- Optimal use of resources
- Up to 10-year battery life
- Compatible with most systems
- Can be used in almost all container types
- 24/7 Internet access
- User-friendly portal
- Key figures and benchmarking
- Realtime monitoring

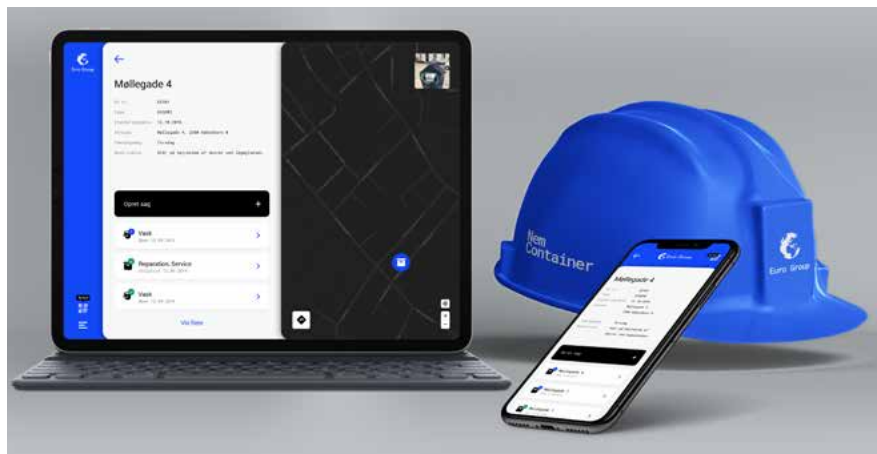

Euro sensor and nemcontainer

Nemcontainer

We have developed a software system (nemcontainer). The system allows you to view the location of the container, as well as any activity related to maintenance, repairs and service.

The customer has their own login and can view containers and locations. You can also order a service, a wash and repair of the container. The date and history of the container will be stored in the software.

Euro Gel Smell

fragrance blocks

The gel effectively treats all unpleasant odours in waste containers and sewage systems, etc.

- Polymer matrix filled with active agents dedicated to inhibition of H₂S, mercaptans, etc.
- Treatment 24 hours a day, 365 days a year.
- Prolonged action: 3 to 6 months.

The Gelactiv® CE350 makes it possible to process and neutralise the poor air flows directly in the waste containers or sewer pipes, regardless of length or composition.
